1. INTRODUCTION

1.1 Scope

This Service Level Agreement (SLA) documents the agreed provision of service for the supply of aeronautical information (Data) by [organisation name] (The Data Originator) to [organisation name] (The AISP) and the agreed standards to which the said information shall be published by the AISP. **This SLA is overseen and managed by the [organisation name] (The Regulator).**

1.2 Benefits Gained from an SLA

An SLA is a contract between parties that defines the services provided, the indicators associated with these services, acceptable and unacceptable service levels, liabilities on the part of the service provider and the customer, and actions to be taken in specific circumstances.

In the scope of this SLA only modes of operation are discussed and formalised and financial components are not considered.

The basic objectives of an SLA are as follows:

- Better communication. It facilitates two-way communication between the parties. This communication starts at the beginning of the process to establish an SLA and continues throughout the life of the arrangement. The parties involved come together in order to understand each other's needs, priorities and concerns, and to gain an insight into the problems which may be faced by each party through the failure of each party to fulfil their obligations.**
- Guards against expectation creep. It is not uncommon for one party's expectations of another to be higher than that which may be considered reasonable. Discussing these expectations and the resource commitments necessary to meet them is one activity undertaken in the establishment of an SLA. The process facilitates the identification and discussion of expectations. As a result, it helps identify service levels that are considered acceptable by each party and which are attainable and achievable.**
- Mutually agreed standard. It sets an agreed standard against which performance may be measured. It identifies customer expectations, defines the boundaries of the service provision and clarifies responsibilities. In the absence of a shared understanding about needs and priorities, it is easy for conflicts to arise between parties. An SLA and the communication process involved in establishing it help to minimise the conflicts between the parties and provides a means for conflict resolution should a problem arise.**
- A process for gauging service effectiveness. As the SLA defines standards against which the service may be measured and evaluated, it provides the basis for performing an assessment of the effectiveness of the service.**

1.3 Parties to the Agreement

The following table describes and names the legal entities and their representatives who have reviewed and approved this SLA.

Entity	Address	Re presentative
[Insert Regulator details here]		
[Insert AISP details here]		
[Insert Data Originator details here]		

Table 1: Parties to Agreement

1.4 Perspective – Regulative Environment

A number of documents specify the regulatory requirements for the provision of information by Data Originators and its subsequent processing by AIS. These include:

- ICAO Annex 4 “Aeronautical Charts”;
- ICAO Annex 5 “Units of Measurement to be Used in Air and Ground Operations”;
- ICAO Annex 11 “Air Traffic Services”;
- ICAO Annex 14 “Aerodromes”;
- ICAO Annex 15 “Aeronautical Information Services”.

These documents are further supported by guidance material, including:

- ICAO Doc 8126 “AIS Manual”;
- ICAO Doc 8697 “Aeronautical Chart Manual”;
- ICAO Doc 9674 “WGS-84 Manual”;
- Operating Procedures for AIS Dynamic Data (OPADD).

[Add any State applicable regulation here]

1.5 Term

The term of this SLA shall be as follows:

Start Date: [Insert start date here]

End Date: [Insert end date here]

Duration: [Insert duration here]

Once agreed The AISP and The Data Originator cannot withdraw from all or part of this agreement within the above dates.

[Add any other agreed constraints of / specification for the scope here.]

1.6 Conventions

Within this SLA, the following conventions are used:

3.5G-8

Appendix 3.5G to WP-17 on Agenda Item 3.5

1.6.1 Time

1.6.2 Presentation of Date and Time in All-numeric Form

This SLA uses Co-ordinated Universal Time (UTC) as described in Attachment D of Annex 5.

This SLA uses the procedures for writing the date and time in all-numeric form as described in Attachment E of Annex 5.

Times expressed as a number of "Office hours" include the hours from 8:00 to 16:00 Dutch local time (Monday to Friday).

Times expressed as a number of "Office hours" include business hours, Monday through Friday, excluding designated holidays.

Unless specifically mentioned otherwise, all durations specified are in working days.

1.6.3 Quality Attributes / Definitions

Accuracy: A degree of conformance between the estimated or measured value and the true value.

AIRAC System: A system aimed at advance notification based on common effective dates, of circumstances that necessitate significant changes in operating practices.

NOTAM System: A system of distributing notices by means of telecommunication, that contain information concerning the establishment, condition or change in any aeronautical facility, service, procedure or hazard, the timely knowledge of which is essential to personnel concerned with flight operations.

Resolution: A number of units or digits to which a measured or calculated value is expressed and used.

Integrity: A degree of assurance that an aeronautical data item and its value have not been lost or altered since its origination or authorised amendment.

Timeliness: A characteristic by which either data is provided or actions performed, with sufficient time remaining so as not to impact later actions and possibly jeopardise the achievement of the required result within due time.

1.6.4 Data Categories

The following data classifications are used within this document:

Routine: There is a very low probability when using corrupted routine data that the continued safe flight and landing of an aircraft would be severely at risk with the potential for catastrophe.

The permitted maximum error rate is 1 in 1000, providing an integrity level of 1×10^{-3} .

Essential: There is a low probability when using corrupted essential data that the continued safe flight and landing of an aircraft would be severely at risk with the potential for catastrophe.

The permitted maximum error rate is 1 in 100,000, providing an integrity level of 1×10^{-5} .

Critical: There is a high probability when using corrupted critical data that the continued safe flight and landing of an aircraft would be severely at risk with the potential for catastrophe.

The permitted maximum error rate is 1 in 100,000,000, providing an integrity level of 1×10^{-8} .

1.7 Entities Involved for Data Provision

The following entities categories involved are used within this document:

1. Civil Aviation Authority (CAA)

The national body responsible for the overall supervision of aviation-related activities.

2. **[Insert Organisation Name Here]**

The organisation responsible for the provision of Air Navigation Services for the State.

3. Aeronautical Information **Management/Services (AIM/AIS)**

The unit of the ANSP responsible for the provision of Aeronautical Information Services (AIS) for the State.

4. **Data Originator**

Describe the data originator body here.

5. National Supervisory Authority (NSA)

2. SERVICES AND SERVICE LEVELS

2.1 Service Description

The Data Originator will provide the AISP with the Data for which it is responsible as listed in Table 2, below.

<u>Data Entity</u>	<u>Description</u>
X	
Y	
Z	

Table 2: Data to be Provided

The AISP will, in turn, publish the information within the National Publication and in accordance with ICAO and National regulations.

2.1.1 Regulation

[\[Detail here the regulation that applies to this SLA\]](#)

2.2 Optional Services

[\[Detail any further services required here\]](#)

2.3 Exclusions

[\[Detail any further services required here\]](#)

2.4 Limitations

[\[Detail any further services required here\]](#)

2.5 Entities Involved

[\[Detail any the entities involved here\]](#)

2.6 Service Levels

2.6.1 Data Originator

All Data shall be provided in accordance with the following criteria:

1. The Data shall include its effective date.
2. The Data shall include its period of validity.
3. The Data shall be provided with the requested publication.
4. The Data shall be prepared in accordance with the following standards:
 - a. [\[List standards here\]](#)

Additionally, the Data Originator shall provide each of the identified Data items in Table 2, in accordance with the following specific criteria:

2.6.1.1 Data Item x – Repeat for each data item.

The Data shall be provided at least **[insert timeliness requirement]** days prior to the effective date.

The Data shall be provided by **[insert delivery requirement]** means.

The Data shall be provided in **[insert required format of delivery]**.

The Data shall be provided with the following quality attributes:

Attribute	Accuracy	Resolution	Integrity Level	Note
X'1	20 m	1 second	Critical	
X'2	1 ft	0.1 ft	Essential	
X'3	n/a	n/a	Routine	Textual data

Table 3: Data Attributes – Entity X

The Data shall be provided by with the following mete-data:

- [insert meta-data requirement]**.

[Add more requirements for the provision of information]

2.6.2 AISP

The AISP shall process the Data upon receipt.

The AISP shall present a draft publication including the Data for approval by **[insert approver]** at least **[insert timeliness requirement]** days prior to the effective date.

The AISP shall publish the Data within the requested publication unless otherwise agreed, in writing, with the Data Originator.

[Add more requirements for the publication of information]

2.7 Service Level Indications

The following measures will be used to assess the performance of the service:

3.5G-12

Appendix 3.5G to WP-17 on Agenda Item 3.5

Measure	Description	Target date ¹ . Late provision must be alerted to the AIM as soon as known. The publication of this information will then be the subject of negotiation.
Format	The Data is provided by the Data Originator to the AIM, without errors in presentation or content, in the format detailed within this SLA.	95%
Draft Publication	The AIM will present a draft publication to the Data Originator for approval within the specified timeframe.	95% by required due date ² . 100% within one day following due date ² .
Publication	The AIM will publish the Data within the required period (e.g. in compliance with the AIRAC cycle).	95% by required due date.
Quality of Publication	The IAIP product prepared will be provided in accordance with the applicable standards.	95%
Add and amend indications as required.		

Due date is used to mean the number of days in advance of the effective date that the information is to be provided to the AIS. This period is defined in section 2.6.1.

Measure	Description	Target
Quality of Data	The Data is delivered by the Data Originator to the AIM with the required quality levels.	100%
Timeliness	The Data is delivered by the Data Originator to the AIM within the specified timeframe.	95% by required due date ¹ . 100% within three days following due

Table 4: Service Level Indications

²Due date is used to mean the number of days in advance of the effective date that the draft publication is to be provided to the Data Originator.

4. FUTURE INTENTIONS

4.1 General

Although outside the scope of this SLA, AIM and the [\[Data Originator\]](#) have a number of intentions for improvement which may have a consequential impact on this SLA.

The following sections outline these and should be considered during the review of the SLA, once it is in operation.

4.2 [Describe future intentions here](#)

5. REFERENCES

5.1 Refer to docs and add a short description.

End of Document

a) Proposal for Amendment to the AFI Basic ANP (Doc 7474 Vol. II) for the introduction of a new Section related to e-TOD

World Geodetic System – 1984 (WGS-84)

67. In order to ensure that quality (accuracy, resolution and integrity) and traceability requirements for the WGS-84 related geographical coordinate data are met, States must take measures to develop and introduce a quality system programme. This programme containing procedures, processes and resources should be in conformity with the International Organization for Standardization (ISO) 9000 series of quality assurance standards.

(Insert the following new Text)

Electronic Terrain and Obstacle Data (eTOD) Requirements

(FASID Table AIS 9)

68. Recognizing that significant safety benefits for international civil aviation will be provided by in-flight and ground-based applications that rely on quality electronic Terrain and Obstacle Data (eTOD), States should make every effort to implement the eTOD provisions in accordance with Chapter 10 of Annex 15 and Doc 9881.

69. FASID Table AIS-X sets out the requirements for the provision of Electronic Terrain and Obstacle Data (e-TOD) to be provided by States.

70. The implementation of e-TOD should involve different Administrations within and outside the Civil Aviation Authority i.e.: AIS, Aerodromes, Military, National Geographic and Topographic Administrations/Agencies, procedure designers, etc.

71. States, while maintaining the responsibility for data quality and availability, should consider to which extent the provision of electronic terrain and obstacle data could be delegated to national geodetic Institutes/Agencies, based on Service Level Agreement reflecting such delegation.

72. States should consider carefully the required level of details of collected terrain and obstacle data with particular emphasis on obstacle data and associated cost.

73. States should take into consideration the requirements for update/maintenance of data, especially related to obstacles.

74. States should work co-operatively with regard to the cross-border issue, for the sake of harmonization and more efficient implementation of e-TOD.

(Renumber the following paragraphs)

Appendix C to WP/17 on Agenda Item 3.5

FASID TABLE AIS-X — e-TOD REQUIREMENTS

EXPLANATION OF THE TABLE

- 1 Name of the State, territory or aerodrome for which electronic Terrain and Obstacle Data (e-TOD) are required with the designation of the aerodrome use:
- RS — international scheduled air transport, regular use RNS — international non-scheduled air transport, regular use RG — international general aviation, regular use
AS — international scheduled air transport, alternate use
- 2 Runway designation numbers
- 3 Type of each of the runways to be provided. The types of runways, as defined in Annex 14, Volume 1, Chapter I, are:
- NINST — non-instrument runway;
NPA — non-precision approach runway
PA1 — precision approach runway, Category I; PA2 — precision approach runway, Category II; PA3 — precision approach runway, Category III.
- 4 Requirement for the provision of Terrain data for Area 1, shown by an “X” against the State or territory to be covered.
- 5 Requirement for the provision of Terrain data for Area 2 (TMA), shown by an “X” against the aerodrome to be covered.
- 6 Requirement for the provision of Terrain data for Area 2 (45 Km radius from the ARP), shown by an “X” against the aerodrome to be covered.
- 7 Requirement for the provision of Terrain data for Area 3, shown by an “X” against the aerodrome to be covered.
- 8 Requirement for the provision of Terrain data for Area 4, shown by an “X” against the runway threshold to be covered.
- 9 Requirement for the provision of Obstacle data for Area 1, shown by an “X” against the State or territory to be covered.
- 10 Requirement for the provision of Obstacle data for Area 2 (TMA), shown by an “X” against the aerodrome to be covered.
- 11 Requirement for the provision of Obstacle data for Area 2 (45 Km radius from the ARP), shown by an “X” against the aerodrome to be covered.
- 12 Requirement for the provision of Obstacle data for Area 3, shown by an “X” against the aerodrome to be covered.
- 13 Remarks (timetable for implementation)

AIM PERFORMANCE OBJECTIVES

NATIONAL PERFORMANCE OBJECTIVE - IMPLEMENTATION OF WGS-84 AND e-TOD				
Benefits				
Environment	•	Supporting benefits described in performance objectives for PBN		
Efficiency	•	WG8 -84 is a prerequisite for performance-based navigation, benefits described in performance objectives for PBN.		
	•	support approach and departure procedure design and implementation		
	•	improve aircraft operating limitations analysis		
Safety	•	support aeronautical chart production and on-board databases		
	•	improve situational awareness		
	•	support determination of emergency contingency procedures		
	•	support technologies such as ground proximity and minimum safe altitude warning systems		
	•	see benefits described in performance objectives for PBN		
KPI	•	status of implementation of WGS-84 in the AFI Region		
	•	status of implementation of e-TOD in the AFI Region (for Areas 1 & 4)		
Proposed Metrics	•	number of States having fully implemented WGS-84		
	•	number of States having organized e-TOD awareness campaigns and training programmes		
	•	number of States having implemented e-TOD for Areas 1 & 4.		
<i>Strategy</i>

AIS/MAP PERFORMANCE OBJECTIVES

ELIMINATION OF IDENTIFIED AIS/MAP DEFICIENCIES				
(implementation of WGS-84 coordinates, publication of aeronautical charts and timely publication and updating of AIS/MAP documents, i.e. NOTAMs, AIPs, AICs, etc.)				
Benefits				
Efficiency	<ul style="list-style-type: none"> improved collaborative decision-making through sharing aeronautical data information 			
Safety	<ul style="list-style-type: none"> enhance safety by timely exchange air safety data, i.e. electronically and wider distribution of such data 			
<i>Strategy</i> <i>Short term (2010)</i> <i>Medium term (2011 - 2015)</i>				
ATM OC COMPONENTS	TASKS	TIMEFRAME START-END	RESPONSIBILITY	STATUS
AIS/MAP	<ul style="list-style-type: none"> publication of relevant aeronautical charts. 	2008 - 2009 2011	States/ANSPs	Survey for APIRG
	<ul style="list-style-type: none"> publication of WGS-84 coordinates for en-route waypoints and use for GNSS coordinates for terminal approaches and departure procedures 	2008 - 2009 2011	States/ANSPs	Survey for APIRG
	<ul style="list-style-type: none"> publication of AIPs, NOTAMs and AICs using standards formats. 		States/ANSPs	
	<ul style="list-style-type: none"> States concerned to develop action plan to eliminate the deficiencies 	2008 - 2009 2011	States/ANSPs	Survey for APIRG
Linkage to GPIs	GPI/18: Aeronautical information; GPI/20: WGS-84			

Table AIM-1**Responsibility for the provision of AIM Services**

EXPLANATION OF THE TABLE

Column:

- 1 Name of the State or territory
- 2 Designated international NOTAM Office (NOF)
- 3 Designated State for AIP production
- 4 Designated State for aeronautical charts (MAP) production
- 5 Designated State for the provision of the authoritative Integrated Aeronautical Information Database (IAID)
- 6 Designated State for the provision of the Pre-flight information services
- 7 Remarks — additional information, as appropriate.

FASID TABLE AIM-1
Responsibility for the provision of AIM Services

State	NOF	AIP	MAP	IAID	Pre-Flight Briefing	Remarks
1	2	3	4	5	6	7
Angola						
Benin						
Burkina Faso

Table AIM-2

Provision of AIM products and services based on the Integrated Aeronautical Information Database (IAID)

EXPLANATION OF THE TABLE

Column:

- 1 Name of the State or territory for which the provision of AIM products and services based on the IAID is required.
- 2 Requirement for the implementation and designation of the authoritative IAID, shown by:
FI – Fully Implemented
PI – Partially Implemented
NI – Not Implemented
Note 1 — The IAID of a State is a single access point for one or more databases (AIS, Terrain, Obstacles, AMDB, etc). The minimum set of databases which should be integrated is defined in Annex 15.
Note 2 — Information providing detail of “PI” should be given in the Remarks column (the implemented components of the IAID).
Note 3 — The information related to the designation of the authoritative IAID should be published in the AIP (GEN 3.1)
- 3 Requirement for an IAID driven AIP production, shown by:
FC – Fully compliant (eAIP: Text, Tables and Charts)
PC – Partially compliant
NC – Not compliant
Note 4 — AIP production includes, production of AIP, AIP Amendments and AIP Supplements
- 4 Requirement for an IAID driven NOTAM production, shown by:
FC – Fully Compliant
NC – Not compliant
- 5 Requirement for an IAID driven SNOWTAM production, shown by:
FC – Fully Compliant
NC – Not compliant
- 6 Requirement for an IAID driven PIB production, shown by:
FC – Fully compliant
NC – Not compliant
- 7 Requirement for Charting systems to be interoperable with the IAID, shown by:
FC – Fully compliant
PC – Partially compliant
NC – Not compliant
- 8 Requirement for Procedure design systems to be interoperable with the IAID, shown by:
FI – Fully Implemented
PI – Partially Implemented
NI – Not Implemented

- 9 Requirement for ATS systems to be interoperable with the IAID, shown by:
FI – Fully Implemented
PI – Partially Implemented
NI – Not Implemented
- 10 Action Plan — short description of the State’s Action Plan with regard to the provision of AIM products and services based on the IAID, including planned date(s) of full compliance, as appropriate.
- 11 Remarks — additional information, including detail of “PC”, “NC”, “PI” and “NI”, as appropriate.

Table AIM-4

Aeronautical Data Quality

EXPLANATION OF THE TABLE

Column:

- 1 Name of the State or territory.
- 2 Compliance with the requirement for implementation of QMS for Aeronautical Information Services including safety and security objectives, shown by:
 - FC – Fully compliant
 - PC – Partially compliant
 - NC – Not compliant
- 3 Compliance with the requirement for the establishment of formal arrangements with approved data originators concerning aeronautical data quality, shown by:
 - FC – Fully compliant
 - PC – Partially compliant
 - NC – Not compliant
- 4 Implementation of digital data exchange with originators, shown by:
 - FI – Implemented
 - PI – Partially Implemented
 - NI – Not implemented

Note 1 – Information providing detail of “PI” and “NI” should be given in the Remarks column (percentage of implementation).
- 5 Compliance with the requirement for metadata, shown by:
 - FC – Fully compliant
 - PC – Partially compliant
 - NC – Not compliant
- 6 Compliance with the requirements related to aeronautical data quality monitoring (accuracy, resolution, timeliness, completeness), shown by:
 - FC – Fully compliant
 - PC – Partially compliant
 - NC – Not compliant
- 7 Compliance with the requirements related to aeronautical data integrity monitoring, shown by:
 - FC – Fully compliant
 - PC – Partially compliant
 - NC – Not compliant
- 8 Compliance with the requirements related to the AIRAC adherence, shown by:
 - FC – Fully compliant
 - PC – Partially compliant
 - NC – Not compliant
- 9 Action Plan — short description of the State’s Action Plan with regard to aeronautical data quality requirements implementation, including planned date(s) of full compliance, as appropriate.
- 10 Remarks — additional information, including detail of “PC”, “NC”, “PI” and “NI”, as appropriate.

Table AIM-5

World Geodetic System-1984 (WGS-84)

EXPLANATION OF THE TABLE

Column:

- 1 Name of the State or territory for which implementation of WGS-84 is required.
- 2 Compliance with the requirements for implementation of WGS-84 for FIR and Enroute points, shown by:
 - FC – Fully compliant
 - PC – Partially compliant
 - NC – Not compliant
- 3 Compliance with the requirements for implementation of WGS-84 for Terminal Areas (arrival, departure and instrument approach procedures), shown by:
 - FC – Fully compliant
 - PC – Partially compliant
 - NC – Not compliant
- 4 Compliance with the requirements for implementation of WGS-84 for Aerodrome, shown by:
 - FC – Fully compliant
 - PC – Partially compliant
 - NC – Not compliant
- 5 Compliance with the requirements for implementation of Geoid Undulation, shown by:
 - FC – Fully compliant
 - PC – Partially compliant
 - NC – Not compliant
- 6 Action Plan — short description of the State's Action Plan with regard to WGS-84 implementation, including planned date(s) of full compliance, as appropriate.
- 7 Remarks — additional information, including detail of "PC" and "NC", as appropriate.

FASID Table AIM-7

PRODUCTION RESPONSIBILITY FOR SHEETS OF THE WORLD AERONAUTICAL CHART - ICAO 1:1 000 000

EXPLANATION OF THE TABLE

Column:

- 1 Name of the State accepting production responsibility.
- 2 World Aeronautical Chart — ICAO 1:1 000 000 sheet number(s) for which production responsibility is accepted.
- 3 Remarks.

Note 1— When Aeronautical Charts — ICAO 1:500 000 or Aeronautical Navigation Charts — ICAO Small Scale, are made available instead of the 1:1 000 000 chart, this is to be indicated in the Remarks column.

Note 2— In those instances where the production responsibility for certain sheets has been accepted by more than one State, these States by mutual agreement should define limits of responsibility for those sheets.

Table AIM-8

Pre-Flight Information Services

EXPLANATION OF THE TABLE

Column:

- 1 Name of the State or territory.
 - 2 Compliance with the requirements for the provision of Pre-Flight Information Bulletins (PIB), shown by:
 - FC – Fully compliant, against each type of PIB
 - PC – Partially compliant, against each type of PIB
 - NC – Not compliant, against each type of PIB
- Note 1 — AD: Aerodrome type bulletins
Area: Area type bulletins (FIR or group of FIRs or States)
FIR route: FIR route specific bulletin
Narrow route: Narrow path route specific bulletin*
- 3 Compliance with the requirements for the availability of the elements of the Integrated Aeronautical Information Publications (IAIP), maps and charts to the flight operations personnel, shown by:
 - FC – Fully compliant
 - PC – Partially compliant
 - NC – Not compliant
 - 4 Requirement for a common point of access to aeronautical information and meteorological information briefings, shown by:
 - FI – Fully Implemented
 - PI – Partially Implemented
 - NI – Not implemented
 - 5 Action Plan — short description of the State's Action Plan with regard to Pre-Flight Information Services, including planned date(s) of full compliance, as appropriate.
 - 6 Remarks — additional information, including detail of "PC", "NC", "PI" and "NI", as appropriate.

Table AIM-9

AIM Certification

EXPLANATION OF THE TABLE

Column:

1 Name of the State or territory for which implementation of AIM Certification is required.

2 Availability of AIM Regulations, shown by:

FC – Fully compliant

PC – Partially compliant

NC – Not compliant

Note.— Please provide in the Remarks column detail of “PC” and “NC”.

3 Compliance with the requirements for the establishment of a Safety Oversight System for ensuring the effective implementation of safety-related policy and procedures in the area of AIM, shown by:

FC – Fully compliant

PC – Partially compliant

NC – Not compliant

Note 1.— Please provide in the Remarks column detail of “PC” and “NC”.

Note 2.— A Safety Oversight System is based on the eight (8) Critical Elements (CEs) as defined in the ICAO Safety Oversight Manual (Doc 9734, Part A).

Note 3.— As part of the Safety Oversight System, States should, in particular:

a) establish an entity responsible for the safety oversight of the AIS/AIM service provider(s)(not necessarily limited to the safety oversight of AIM) with clearly defined functions and responsibilities, or delegate this function to a Regional/Sub-Regional Organization;

b) ensure the availability of sufficient number of qualified AIM inspectors;

c) establish minimum qualifications and experience for the AIM inspectorate staff ;

d) establish detailed job descriptions reflecting all the regulatory and safety oversight tasks for the AIM inspectorate staff;

e) establish the necessary procedures for the AIM inspectorate staff;

f) establish and implement a formal surveillance programme for the continuing supervision of the AIS/AIM service provider(s) and ensure that safety oversight is effectively conducted; and

g) establish and implement a mechanism/system for the elimination of deficiencies identified by the AIM inspectorate staff.

4 Compliance with the requirements for implementation of AIM certification, shown by:

FC – Fully compliant

PC – Partially compliant

NC – Not compliant

Note 4.— AIM Certification may be performed within the framework of ANS Certification

- 5 Action Plan — short description of the State’s Action Plan with regard to the implementation of the different requirements of AIM certification, including planned date(s) of full compliance, as appropriate.
- 6 Remarks — additional information, including detail of “PC” and “NC”, as appropriate.

Appendix G to WP/17 on Agenda Item 3.5

Proposal for Amendment to the AFI Basic FASID (Doc 7474 Vol.II) for the inclusion of materials related to transition from AIS to AIM

Amendment of the AIS Parts of the AFI Basic ANP and FASID in order to introduce/develop Planning material related to the transition from AIS to AIM consisting of new AIM Tables. This amendment proposal to Doc. 7474 (Vol. I and II) relates to the requirement for an overview of the Air Navigation Plan and the requirements for FASID tables, along with amendments to text which will be relevant to operations within the AFI Region of responsibility.

**AFI ANP, VOLUME II, FASID
PART x - AERONAUTICAL INFORMATION MANAGEMENT (AIM)**

(Insert the following new Text)

1. INTRODUCTION

1.1 The material in this part complements that contained in Part x — AIM of the AFI Basic ANP and should be taken into consideration in the overall planning processes for the AFI region.

1.2. This part contains the details of the facilities and services to be provided to fulfill the basic requirements of the plan as agreed between the provider and user States concerned. Such agreement indicates a commitment on the part of the State(s) concerned to implement the requirement(s) specified. It provides a structured framework for States to plan and to monitor their progress and supports regional and national plans to implement the transition to AIM. This element of the FASID, in conjunction with the AFI Basic ANP, is kept under constant review by APIRG in accordance with its schedule of management, in consultation with user and provider States and with the assistance of the ICAO AFI Regional Office.

1.3. To satisfy new requirements arising from the Global Air Traffic Management Operational Concept, aeronautical information services must transition to a broader concept of aeronautical information management, with a different method of information provision and management given its data-centric nature as opposed to the product-centric nature of AIS. AIM is the dynamic, integrated management of aeronautical information services – safely, economically and efficiently – through the provision and exchange of quality assured digital aeronautical data in collaboration with all parties.

2. ORGANISATION AND PROVISION OF AIM FACILITIES AND SERVICES

2.1. AIM requires all aeronautical information to be stored as data sets that can be accessed by user applications. The establishment and maintenance of an Integrated Aeronautical

Appendix G to WP/17 on Agenda Item 3.5

Information Database where data sets are integrated and used to produce current and future AIM products and services is a fundamental step in the transition to AIM. The following AIM FASID tables contain planning criteria and provisions requiring implementation and compliance by States:

- Responsibility for the provision of AIM Services
- Provision of AIM products and services based on the Integrated Aeronautical Information Database (IAID)
- Terrain and Obstacle data sets and Airport Mapping Databases (AMDB)
- Aeronautical Data Quality
- World Geodetic System – 1984 (WGS84)
- Aeronautical Charts
- Production Responsibility for sheets of the World Aeronautical Chart – ICAO 1:1 000 000
- Pre-Flight Information Services
- AIM Certification

2.2. FASID Table AIM-1 sets out the responsibilities for the provision of AIM services in the AFI Region. It takes into account the current situation and new developments specific to the AFI Region where States delegate certain AIS/AIM services to a Regional Agency (e.g. with the establishment of Functional Airspace Blocs (FAB)). The responsibilities for the provision of aeronautical data, products and services in such cases need to be clearly assigned.

2.3. FASID Table AIM-2 sets out the requirements for the Provision of AIM products and services based on the Integrated Aeronautical Information Database (IAID). It reflects the transition from the current product centric AIS to data centric AIM. For the future digital environment it is important that the -2 authoritative databases are clearly designated and such designation must be published for the users. This is achieved with the concept of the Integrated Aeronautical Information Database (IAID), a single access point for one or more authoritative databases (AIS, Terrain, Obstacles, AMDB, etc) for which the State is responsible.

2.4. FASID Table AIM-3 sets out the requirements for the provision of Terrain and Obstacles datasets and Aerodrome Mapping Data Bases (AMDB). The AFI e-TOD implementation Checklist at **Attachment A1** and the AFI e-TOD implementation strategy at **Attachment A2** to Part x - AIM of the AFI FASID is developed to assist States in the process of e-TOD implementation.

2.5. FASID Table AIM-4 sets out the requirements for aeronautical data quality. **Attachment B** to Part x - AIM of the AFI FASID describes the safety and security objectives to be included in the Quality Management System of AIM. **Attachment C** to Part x - AIM of the AFI FASID lists the data originators and the type of aeronautical data/information required to be exchanged by direct electronic connection.

2.6. FASID Table AIM-5 sets out the requirements for the implementation of the World Geodetic System – 1984 (WGS-84). The requirement to use a common geodetic system remains essential to facilitate the exchange of data between different systems. The expression of all coordinates in the AIP and charts using WGS-84 is an important first step for the transition to AIM.

Appendix G to WP/17 on Agenda Item 3.5

2.7. FASID Table AIM-6 sets out the requirements for the production of aeronautical charts. The provision of digital mapping data bases e.g. AMDB, allows for the provision and use of electronic aeronautical charts. Annex 4 SARPs include the requirement for an Electronic Aerodrome Terrain and Obstacle Chart.

2.8. FASID Table AIM-7 sets out the responsibilities for the production of the sheets of the World Aeronautical Chart 1: 1 000 000 (WAC). The assignment of the WAC sheets is determined by regional agreement, based on the delineation of areas specified in Appendix 5 to Annex 4 and taking into consideration the cross-border issues.

Note.- The World Aeronautical Chart 1: 1 000 000 provides information to satisfy the requirements of visual air navigation.

2.9. FASID Table AIM-8 sets out the requirements for the provision of pre-flight information services.

2.10. FASID Table AIM-9 sets out the requirements for AIM Certification.

Appendix H J-1

**AFI REGION QUESTIONNAIRE FOR STATE'S TRANSITION FROM AIS TO AIM
National Plan for the transition from AIS to AIM**

a) Have you developed a National Plan for the transition from AIS to AIM? If Yes, is it based on the ICAO Roadmap (Phases 1, 2 and 3) ?		YES	NO
Sample	No formal plan has been developed for the whole transition but a set of initiatives for several steps of the Roadmap. Phase 1 is fully covered by our initiatives / Phases 2 and 3 are partly covered by our initiatives.		X
STATE			

1. Phase 1 – Consolidation (2009)

a) What do you consider a realistic timeframe for the implementation of Phase 1?	
Sample	2013 – due to the implementation of QMS by the raw data originators Quality measures will be reinforced to ensure the required level of quality of the aeronautical information. Before end of June 2013. Incremental improvements in data quality will be achieved through the implementation of the revised QMS. Data quality is expected to be fully compliant before the end of June 2017.
a) What do you consider a realistic timeframe for the implementation of Phase 1?	
STATE	

b) What is the status of implementation of the following steps of Phase 1 in your State?			
P-03 — AIRAC adherence monitoring			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample	Implemented up to the process step “publication” in the frame of the Quality Management System.		There seems currently no effective means available to monitor the process steps after “publication”, (which is beyond our influence and control (mailing).
STATE			

Appendix H J-2

b) What is the status of implementation of the following steps of Phase 1 in your State?			
P-03 — AIRAC adherence monitoring			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
STATE			

b) What is the status of implementation of the following steps of Phase 1 in your State?			
P-05 — WGS-84 implementation			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample	Implemented – since 1998		Geoid Undulation not yet implemented
STATE			

b) What is the status of implementation of the following steps of Phase 1 in your State?			
P-04 — Monitoring of States' differences to Annex 4 and Annex 15			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample	During preparations for ICAO USOAP all differences to Annex 4 and Annex 15 have been identified and recorded, using standard checklists supplied from ICAO. Since then, some of those differences are removed and some standards are changed, checklists were updated. Differences are published in the AIP.		Dialogs are conducted concerning differences between CAA and service provider about measures and time frame.
STATE			

AppendixH J-3

b) What is the status of implementation of the following steps of Phase 1 in your State?			
P-17 — Quality			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample	Partially achieved. Not in place for all data throughout the data management chain. Partly implemented concerning integrity.		Data exchange tool will improve data integrity.
STATE			

2. Phase 2 – Going Digital (2009 – 2011)

a) What do you consider a realistic timeframe for the implementation of Phase 2?	
Sample	Many steps of Phase 2 are already implemented; however the entire scope of data will be covered by 2015.
STATE	

b) What is the status of implementation of the following steps of Phase 2 in your State?			
P-01 — Data quality monitoring			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample	A structured monitoring system is not implemented. Quality management in the chain is fractured.		State policy under development
STATE			

Appendix H J-4

a) What is the status of implementation of the following steps of Phase 2 in your State?			
P-02 — Data integrity monitoring			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
STATE			
a) What is the status of implementation of the following steps of Phase 2 in your State?			
P-06 — Integrated aeronautical information database			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample	AISP operates a database of static aeronautical data based on AICM/AIXM 4.5 and a separate database for dynamic aeronautical data. The database was converted to the current AIXM 4.5 version with the effective date of 4 th of June 2010. Obstacle data database with only one way exchange from (originator) to AISP under test operation.	With the introduction of a system based on AIXM 5.1 an integration of the static and dynamic database is expected. The deadline for the transition to AIXM 5.1 is not specified yet.	
STATE			
a) What is the status of implementation of the following steps of Phase 2 in your State?			
P-07 — Unique identifiers			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample	AISP uses a model of unique feature identification based on natural keys in compliance with AIXM 4.5.	With the introduction of a system based on AIXM 5.1 the universally unique identifier (UUID) model will be implemented. We expect possible difficulties in the transition process to the new unique identifiers.	
STATE			
b) What is the status of implementation of the following steps of Phase 2 in your State?			
P-07 — Unique identifiers			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
STATE			
a) What is the status of implementation of the following steps of Phase 2 in your State?			
P-08 — Aeronautical information conceptual model			

Appendix H J-5

	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample	The data model which is used by AIXM 4.5 is implemented.	With the introduction of a system based on AIXM 5.1 the appropriate data model will be implemented.	

b) What is the status of implementation of the following steps of Phase 2 in your State?

P-08 — Aeronautical information conceptual model

	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
STATE			

a) What is the status of implementation of the following steps of Phase 2 in your State?

P-11 — Electronic AIP

	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
STATE			

b) What is the status of implementation of the following steps of Phase 2 in your State?

P-11 — Electronic AIP

	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample	No	Initial eAIP produced May 11. Operational version planned for Sep 11.	AIP available in digital format (PDF) on CD and on the web
STATE			

a) What is the status of implementation of the following steps of Phase 2 in your State?

P-13 — Terrain

	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample		Terrain datasets are available, but unfit to cover all eTOD requirements. Implementation is planned until mid 2013	Implementation Project is ongoing, charging mechanism under discussion. State policy under development.
STATE			

Appendix H J-6

b) What is the status of implementation of the following steps of Phase 2 in your State?			
P-13 — Terrain			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification
STATE			
a) What is the status of implementation of the following steps of Phase 2 in your State?			
P-14 — Obstacles			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample	Partially provided but not compliant with chapter 10 of ICAO Annex 15 Data collected for Area 1	Area 1 planned for 2012 Area 2 and Area 3 planned 2015	State policy under development.
STATE			
b) What is the status of implementation of the following steps of Phase 2 in your State?			
P-14 — Obstacles			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification
STATE			
a) What is the status of implementation of the following steps of Phase 2 in your State?			
P-15 — Aerodrome mapping			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample	No	No concrete planning available yet, still under review.	
STATE			

Appendix H J-7

3. Phase 3 – Information Management (2011 – 2016)

a) What do you consider a realistic timeframe for the implementation of Phase 3?			
Sample	We believe that the foreseen implementation time frame of Phase 3 is too ambitious and think that 2013-2018 would be a more realistic time frame.		
STATE			
a) What is the status of implementation of the following steps of Phase 3 in your State?			
P-09 — Aeronautical data exchange			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample	An AIXM interface from/to the central aeronautical database (refer to P-06) is available.	It is planned to implement the exchange model and mechanisms together with AICM 5.1. This starts in 2013	Not implemented between data providers and AIS
STATE			
b) What is the status of implementation of the following steps of Phase 3 in your State?			
P-09 — Aeronautical data exchange			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
STATE			
a) What is the status of implementation of the following steps of Phase 3 in your State?			
P-10 — Communication networks			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample	AISP has been using the Internet for static and dynamic data exchange for some time already. AFTN is also being used, currently in the role of a backup network for dynamic data exchange. Starting August 2010 the AISP is using PENS for dynamic data exchange.	Migration to AMHS completed. For some specific services Internet is being used.	In some specific cases the ANSP is delivering aeronautical data to customers (airlines) through business-to-business (B2B) web services (industry standard). Briefing services (self- and home briefing) are provided by making use of the Internet in line with the ICAO Doc 9855 (requires update in line with latest developments).

Appendix H J-8

STATE			
a) What is the status of implementation of the following steps of Phase 3 in your State?			
P-12 — Aeronautical information briefing			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample	For many years the ANSP is applying enhanced NOTAM selection criteria for the delivery of NOTAMs to airlines going beyond the ICAO provisions (enhancing the operational relevance for the airline). This procedure is applied in agreement with the Regulator.		Despite the constraints with the current NOTAM selection criteria, the presentation of all required pre-flight information (AIS, FPL and MET) has been improved in an integrated system allowing for custom tailored information.
b) What is the status of implementation of the following steps of Phase 3 in your State?			
P-12 — Aeronautical information briefing			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
STATE			
a) What is the status of implementation of the following steps of Phase 3 in your State?			
P-16 — Training			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample			Currently it is not clear what is expected under the training header. ICAO training manual has to be developed to reflect the new competencies required by the transition to AIM, before national requirements can be developed.

Appendix H J-9

STATE			
-------	--	--	--

a) What is the status of implementation of the following steps of Phase 3 in your State?			
P-18 — Agreements with data originators			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample	Partially achieved, some requirements in current CAA publications.	By July 2013 – Implementation of CAA Policy for Agreements with Data Originators.	Under Development. See P-01.
STATE			
a) What is the status of implementation of the following steps of Phase 3 in your State?			
P-19 — Interoperability with meteorological products			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample	Partially implemented, pre-flight information briefing is provided in harmonized way (one stop shop) in accordance with current ICAO Annex 3 and ICAO Annex 15 requirements.	Next step (fully integrated briefing) will be implemented after the design and implementation of the appropriate data exchange technology is finished (WXXM – Weather Exchange Model).	
STATE			

Appendix H J-10

P-20 — Electronic aeronautical charts			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample			More detailed specification are required; Annex 4, Chapter 20 Electronic Aeronautical Chart Display is too general.
a) What is the status of implementation of the following steps of Phase 3 in your State?			
P-20 — Electronic aeronautical charts			

	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
STATE			

a) What is the status of implementation of the following steps of Phase 3 in your State?			
P-21 — Digital NOTAM			
	Implemented (specify how)	Planned (specify when/how)	Additional comments/clarification required
Sample		Plan to provide digital NOTAM by Jul 2017.	AIXM 5.1 will be the enabler to digital NOTAM.
STATE			

4. Do you expect any specific difficulty which could impede the transition from AIS to AIM?

	YES	NO
--	------------	-----------

Appendix H J-11

Sample	<ul style="list-style-type: none"> x Potential for the non-participation of key stakeholders providing e-TOD data. x Continuation of downturn in aviation industry causing financial constraints on the State AIS provider and other key stakeholders supplying aeronautical data. x Non-agreement by airports to establishment of SLA with State AIS for provision of data. x Justification to aerodromes for additional costs related to the provision of survey data for digital mapping. x Funding, decision making on all levels, manpower capacity, availability of knowledge, technical infrastructure, acceptance by all stakeholders, timescales unrealistic. 	X	
STATE			

5. What kind of assistance/support do you expect from ICAO to expedite the transition from AIS to AIM?

Sample	<ul style="list-style-type: none"> x Specific guidance material for implementation of each subject. Development of more detailed guidance materials, manuals, best practices examples and other supporting documents. x Expeditious revisions to Annex 15 and 4 when appropriate. x Regional workshops and seminars to ensure consistency in the transition to AIM. 		
STATE			

6. Do you have any suggestion to update/improve the ICAO Roadmap for the Transition from AIS to AIM?

Sample	<ul style="list-style-type: none"> x In the first version of the Roadmap document the description of the steps is quite basic and insufficient. Those definitions should be expanded and/or reference to specific standards, manuals and other documents should be provided within it. x Timelines should be permanently monitored and adapted accordingly. 		
STATE			

7. Any other suggestion on the subject?

Sample	<ul style="list-style-type: none"> x ICAO Doc 9881 is only a draft, but the content is paramount for the transition to AIM - e.g. the attributes of terrain and obstacle data need clear definitions and explanations – including examples of obstacles together with attributes. 		
STATE

Appendix I to WP/17 on Agenda Item 3.5

NOTAM Templates related to the operational impact and limited access of airspace and routes affected by volcanic ash

NOTAM Templates
General

Structure of NOTAM content

For each operational area, a short description is given for in which situations the examples can be used. It follows by a description of the structure of the NOTAM text, providing the sequence of the free text information to be inserted in item E). The structure of the information is in accordance with a dedicated digital NOTAM event scenario.

Filling instructions and NOTAM codes

The NOTAM examples include some instructions in completion of the qualifier line, the recommended NOTAM code and instruction in how to describe a published airspace in item E).

Navigation warnings

Type of operational impact/event

These templates apply for the issuance of navigation warnings for potential volcanic activity:

- a) pre-eruption notification and outbreak of a volcano including detailed information regarding the activity,
- b) volcano ash contamination areas forecast spread and movement, for which an area restriction has not been established

Structure of information

The examples follow the structure of the digital NOTAM event scenario *Ad-hoc special activity area*:

airspace type – activity/reason – location note (ex. name of volcano) – geometry (horizontal/vertical) – note(s);

The structure of the information is illustrated by color coding in the NOTAM example 2.2.3.1 with the following meaning:

Red = airspace type

Blue = activity/reason for the area establishment

Green = location note of the activity

Purple = Geometry

Orange = airspace activity note #1 (there may be as many Notes as necessary)

Brown = airspace activity note #2 (there may be as many Notes as necessary)

NOTAM examples

Pre-eruptive volcanic alert

(A0777/10 NOTAMN

Q) BIRD/QWWLW*IIV/NBO/W/000/999/6337N01901Wxxx**

A) BIRD B) 1002260830 C) 1002261100

Appendix J to WP/17 on Agenda Item 3.5

E) **PRE-ERUPTIVE ACTIVITY ALERT FOR VOLCANIC ACTIVITY, POSSIBLY INDICATING IMMINENT ERUPTION (VOLCANO KATLA 1702-03 ICELAND-S)** AS FOLLOWS: **CIRCLE WITH CENTRE 6337.5N 01901.5W AND RADIUS OF XXXNM***. VOLCANIC ASH CLOUD IS EXPECTED TO REACH 50.000 FEET AMSL FEW MINUTES FROM START OF ERUPTION. AIRCRAFT ARE REQUIRED TO FLIGHT PLAN TO REMAIN AT LEAST XXXM CLEAR OF VOLCANO AND MAINTAIN WATCH FOR NOTAM/SIGMET FOR AREA**

F) GND G) UNL

*) *Recommended NOTAM code: QWWLW “Significant volcanic activity will take place...(specify)”.*

**) *A radius shall be included in the qualifier line in a way that encompasses the total area of influence of the NOTAM.*

***) *XXX is a distance established by the Provider State and shall correspond to the radius in the qualifier line.*

Reporting on outbreak of volcanic eruption

(A0778/10 NOTAMR A0777/10

Q) BIRD/QWWLW/IV/NBO/W/000/999/6337N01901Wxxx

A) BIRD B) 1002261000 C) 1002261300

E) **VOLCANIC ERUPTION CONFIRMED IN VOLCANO KATLA 17-2-03 ICELAND-S. CIRCLE WITH CENTRE 6337.5N 01901.5W AND RADIUS OF XXXNM. VOLCANO ASH CLOUD IS EXPECTED TO REACH 50 000 FEET AMSL. AIRCRAFT ARE REQUIRED TO REMAIN AT LEAST XXXNM CLEAR OF VOLCANO AND MAINTAIN WATCH FOR NOTAM/SIGMET FOR BIRD AREA.**

F) GND G) UNL

Reporting on forecasted volcanic ash area [of Medium or High, High/Medium or High/Medium/Low contamination]

(A0207/10 NOTAMN

Q) EIAA/QWWLW/IV/NBO/W /000/200/xxxxNxxxxxE (orW)/xxx*)

A)EIAA B) 1005190700 C) 1005191300

E) **VOLCANIC ASH AREA OF MEDIUM CONTAMINATION FORECAST AS FOLLOWS:**

5243N 00853W - 5330N 00618W - 5150N 00829W - 5243N 00853W**)

F)SFC G) FL200

*) *The geographical reference (coordinates lat/long) shall represent the approximate centre of a circle whose radius encompasses the whole area of influence. A radius shall be included in a way that encompasses the total area of influence of the NOTAM.*

**) *Definition of the area should be done by radius/circle or coordinates only. Definition of airspace by the use of geographical or administrative features such as State borders, rivers, sea shores etc) is not supported by the digital NOTAM event scenario and is therefore not recommended. If operational necessary, this can be defined by providing a simplified polygon larger than the area and excluding a neighbouring FIR, for example.*

Appendix J to WP/17 on Agenda Item 3.5

Coordinates defining the lateral limits of the area (polygon) should be enumerated in clockwise order, each point separated by space-hyphen-space. The last and the first points of the list shall be the same.

Airspace restrictions

Type of operational impact/event

These templates apply for established temporary airspace restrictions for areas affected by volcanic activity:

- a) temporary airspace restriction due to outbreak of volcanic eruption,
- b) temporary airspace restrictions based on forecast ash contamination areas spread and movement

Structure of information

The examples follow the structure of the digital NOTAM event scenario *Ad-hoc special activity area*:

airspace type – activity/reason – location note (ex. name of volcano) – geometry (horizontal/vertical) – note(s);

The structure of the information is illustrated by color coding in the NOTAM example 2.3.3.1 with the following meaning:

Red = airspace type

Blue = activity/reason for the area establishment

Green = location note of the activity

Purple = Geometry

Orange = airspace activity note #1 (there may be as many Notes as necessary)

Brown = airspace activity note #2 (there may be as many Notes as necessary)

NOTAM examples

Established temporary airspace restriction for confirmed volcanic eruption

(A0255/11 NOTAMN

Q) BIRD/QRDCA*/IV/NBO/W/000/500/6337N01901W_{xxx}**

A) BIRD B) 1103260800 C) 1103261200

E) **TEMPORARY DANGER AREA** ESTABLISHED **FOR CONFIRMED VOLCANIC ERUPTION** **VOLCANO KATLA 1702-03 ICELAND-S** AS FOLLOWS: **CIRCLE WITH CENTRE 6337.5N 01901.5W AND RADIUS OF XXXNM***** **VOLCANIC ASH CLOUD REPORTED REACHING FL500. AIRCRAFT ARE REQUIRED TO REMAIN CLEAR OF AREA AND MAINTAIN WATCH FOR NOTAM/SIGMET FOR BIRD AREA.**

F) SFC G) FL500

*) *Recommended NOTAM code: QRTCA “Temporary restricted area activated”, QRDCA “Danger area activated” and QRPCA “Prohibited area activated”, based on States decision on established restriction.*

**) *A radius shall be included in the qualifier line in a way that encompasses the total area of influence of the NOTAM.*

***) *XXX is a distance established by the Provider State and shall correspond to the radius in the qualifier line*

Appendix J to WP/17 on Agenda Item 3.5

Established airspace restriction including volcanic ash area of High [or High/Medium or High/Medium/Low] contamination

7134N 00843W - 7134N 00801W - 6931N 00508W - 6606N 00732W - 6208N 01334W - 6254N 01419W - 6823N 00925W - 7134N 00843W**)

F)SFC G)FL250

**) The geographical reference (coordinates lat/long) shall represent the approximate centre of a circle whose radius encompasses the whole area of influence. A radius shall be included in a way that encompasses the total area of influence of the NOTAM.*

****) Definition of the area should be done by radius/circle or coordinates only. Definition of airspace by the use of geographical or administrative features such as State borders, rivers, sea shores etc) is not supported by the digital NOTAM event scenario and is therefore not recommended. If operational necessary, this can be defined by providing a simplified polygon larger than the area and excluding a neighboring FIR, for example.*

Coordinates defining the lateral limits of the area (polygon) should be enumerated in clockwise order, each point separated by space-hyphen-space. The last and the first points of the list shall be the same.

Aerodrome/heliport closure

Type of operational impact/event

These templates cover the event of a temporary closure of an airport/heliport. The closure can be total (any traffic is forbidden) or partial (with the exception of particular operations, flight or aircraft categories).

Structure of information

The proposed structure of data items in the examples follow the digital NOTAM event scenario *Airport/Heliport closure*:

designator - operational status - forbidden operation - permitted operation – reason - start closure - end closure – note(s)

Appendix J to WP/17 on Agenda Item 3.5

The structure of the information is illustrated by color coding in the NOTAM example 2.3.3.1, with the following meaning:

Red = designator

Blue =operational status (closure/limitation)

Green = forbidden operation (flight/aircraft)

Purple = permitted operation (flight/aircraft) and PPR details

Orange = reason for aerodrome/heliport closed

Indigo = start closure

Pink = end closure, schedule

Brown = further instructions concerning the airport closure Note (there may be as many Notes as necessary)

NOTAM examples

Aerodrome/Heliport closed for all traffic

(A1340/10 NOTAMN

Q)EFIN/QFALC/IV/NBO/A/000/999/6455N01252E/010

A)EFOU B) 1012151600 C) 1012151900EST

E) AD*) EFOU CLOSED FOR ALL TRAFFIC DUE TO VOLCANIC ASH AREA OF HIGH CONTAMINATION FORECAST FOR INFO CALL + 35885207700

*) *If the designator concerns a heliport, the word "HELIPORT" shall be included.*

Aerodrome/Heliport closed for IFR traffic

(A0468/10 NOTAMN

Q)EFIN/QFALT/I/NBO/A/000/999/6455N012521E/010

A)EFOU B) 1003211000 C) 1003211300EST

E) AD EFOU CLOSED FOR IFR TRAFFIC DUE TO VOLCANIC ASH AREA OF MEDIUM CONTAMINATION FOR INFO CALL + 35885207700

Restrictions on route portions/flight levels

Type of operational impact/event

These templates cover the event of a temporary closure of one or more route portions (could be on different routes) due to a common cause, such as the activation of a temporary restricted area.

If more than one route portion is concerned, the eventual vertical layers and schedules specified by the data originator are assumed to apply identically to all route portions (routes); if one route portion has different layers or schedules, it shall be considered a separate event and a separate NOTAM shall be issued.

Structure of information

The proposed structure of data items in the examples follow the digital NOTAM event scenario *Route portion closure*:

route availability - route designator - start point - end point - direction - lower level - upper level - start time - end time - schedule - reason - note(s)

Appendix J to WP/17 on Agenda Item 3.5

The structure of the information is illustrated by color coding in the NOTAM example 2.5.3.1 with the following meaning:

Red = route availability

Blue =route designator

Green = start point (designator of the significant point, and the type in case of a navaid)

Purple = end point (designator of the significant point and the type in case of a navaid)

Indigo = lower level/upper level

Orange = start time/end time/schedule

Pink = reason (explanation of the situation that triggered the closure of the route)

Brown = further instructions concerning the route portion closure Note (there may be as many Notes as necessary)

:

NOTAM examples
